Animals do not change species, animals change from one kind to another. New Bible versions change “kind” to species in Genesis.

8. The textbooks teach that if the Big Bang theory was correct, the _____ had to be spinning. This creates a few problems:
 1. If it wasn’t spinning and just exploded, how did all of the particles, clear down to the atoms pick up a spin?
 2. If it was spinning, then you have another problem with the Conservation of Angular Momentum.
9. The law of Conservation of Angular Momentum: If a spinning object explodes or breaks apart, the pieces will spin in _____ direction. If you concentrate the mass towards the center, _____ picks up.
10. Angular Momentum would have caused the sun to spin rapidly. Actually, our sun spins slowly while the planets orbit rapidly around. Although the sun has ____% of the mass of the solar system, it has only _____ % of the angular momentum.

Because of the Law of the Conservation of Energy, if the original mass was spinning clockwise, all of the pieces should be spinning clockwise. Evolutionists say that there are planets, moons and galaxies that are spinning backwards because they collided with something. This is not scientifically possible.

13. The earth is spinning 1041.6 mph at the equator, but the earth is slowing down. Reasons the earth is slowing down:
 - a. _____ - The inner part of the earth is liquid. The liquid on the inside is causing friction (or dragging motion) that slows the earth down.
 - b. _____ As the earth turns the moon is pulling the tide. The tidal bulge is constantly moving west-east, while the earth rotates east-west creating a braking action that slows the earth down.
 - c. _____ - Hot air rises which means the air near the equator goes straight up. At the north pole cold air goes straight down. These prevailing wind currents slow the earth down.

A limestone building in Indiana had huge flowstone formations in only 40 years. In Australia, a lead mine had been closed down for 55 years. When people went in to inspect it, it resembled a natural cave with stalagmites and stalactites all over the inside of it.
14. Stalactites grow on the _____ and stalagmites are on the _____. Therefore stalactites grow faster than stalagmites as gravity helps stretch the minerals out making them longer faster. Whereas gravity is hindering the growth of stalagmites. In addition, the water tends to splash away on stalagmites leaving less water to evaporate.
